Synthetic Claims Adjudication Policy

Illustrative rules for claim processing in the Healthcare Claims AI POC

Important: This is a fictional synthetic POC document. It is not official payer policy, medical coding advice, legal guidance, or regulatory guidance.

1. Purpose and scope

This document defines a simplified synthetic workflow for validating eligibility, plan coverage, provider network status, procedure information, authorization and documentation. It exists to test software behavior, not to represent any real insurer.

2. Illustrative adjudication checks

Eligibility: compare service_date with coverage_start_date and coverage_end_date.

Procedure and benefit: compare procedure_code, units and billed amount with the synthetic procedure reference and plan assumptions.

Network: consider the provider network status and the synthetic plan type.

Documentation and authorization: missing evidence may result in a pending status or a synthetic denial reason.

3. Status definitions

Paid: synthetic record indicates payment completed.

Pending: more information or review is required.

Denied: synthetic adjudication rejected the claim under one or more configured test reasons.

Partially Paid: the synthetic allowed or paid amount is less than the billed amount.

4. Decision safeguards

A denial reason in the generated dataset is synthetic and illustrative. The assistant must quote the stored reason and identify it as synthetic. Do not infer a reason from claim status alone when no reason record exists.

Fraud signals must not automatically determine claim adjudication. Route unusual patterns for human review.
